

Electricity consumption compliant
with the rules from DA 2023/1184

*fully renewable
electricity*
0g CO₂/MJ

All other electricity consumption
(grid, non-compliant PPAs, etc.)

Three existing methodologies
(DA 2023/1185)

a

Country-wide yearly average grid-intensity factors calculated using standard emissions factors and updated regularly

b

Comparison of full load hours with *carbon-free* hours (H) in the preceding year:

- 0gCO₂/MJ for hours up to H
- 183gCO₂/MJ for hours above H

c

GHG emissions of the marginal producing unit
